SOHAM DAYANAND SOMVANSHI
9975827527 | soham.22311638@viit.ac.in | Pune, India

EDUCATION

Vishwakarma Institute of Information Technology (VIIT), Pune
B.Tech in Information Technology | Jul 2023 – Jun 2027
CGPA: 8.73

EXPERIENCE

AI Automation Intern

Pristine Pro Tech | (Current)

- Designed and implemented **AI-powered automation workflows using n8n** for real-world business use cases
- Built **end-to-end pipelines integrating Google Sheets, LLM APIs (Groq), and custom JavaScript nodes**
- Developed an **automated customer call analysis system**:
  - Extracted and cleaned raw transcripts
  - Applied LLM-based summarization and sentiment analysis
  - Generated structured outputs (summary, sentiment, satisfaction score)
  - Stored results in Google Sheets for reporting and analytics
- Implemented **data validation and guardrails** to ensure reliability of AI-generated outputs
- Optimized workflows for **scalability, structured data processing, and automation efficiency**

AI/ML Intern (NLP Domain)

CDAC

- Worked on a **voice cloning project** using NLP and deep learning techniques
- Gained hands-on experience with **speech processing, model pipelines, and dataset handling**
- Explored **real-world applications of AI in voice synthesis**

🛠 PROJECTS

AI-Based Call Analysis & Automation System

- Built a **fully automated pipeline** to analyze customer support calls
- Used:
  - n8n (workflow automation)
  - LLM (Groq – LLaMA 3)
  - JavaScript for preprocessing and validation
- Features:
  - Transcript cleaning & normalization
  - Date standardization (multiple formats → ISO format)
  - AI-generated:
    - Call summaries
    - Sentiment classification (positive/neutral/negative)
    - Satisfaction scoring (0–10)
  - Structured data storage for analytics
- Ensured **robust error handling and JSON validation for production reliability**

2. Music Recommendation System (Flask-Based Web App)

- **Developed a content-based music recommendation system using similarity metrics**
- **Built a Flask-based API backend to serve recommendations dynamically**
- **Implemented:**
  - **Similarity matrix-based recommendation engine**
  - **REST APIs for song retrieval and prediction**
  - **Real-time recommendation of top 5 similar songs**
- **Used Pandas, NumPy, and Pickle for model handling and data processing**
- **Designed a user interface for song selection and recommendations**

-> **Backend highlights include API endpoints for song listing and prediction, and similarity ranking logic**

💻 SKILLS

Languages: C++, Python, Java
AI/ML: NLP, LLM Integration, Prompt Engineering
Tools & Technologies:

- n8n (Workflow Automation)
- Google Sheets API
- Groq / LLaMA Models
- JavaScript (Node-based scripting in workflows)

Core Concepts:

- Data Processing & Cleaning
- API Integration
- Automation Pipelines
- AI System Design
